

Application

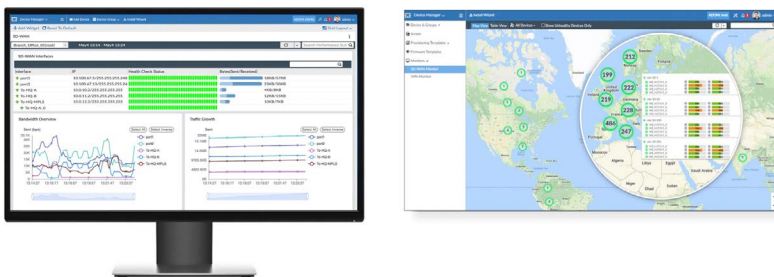

Intelligent Internet is here with Managed SD-WAN for those businesses seeking:

- Absolute maximum Internet **uptime** for your site(s).
- **Priority routing** of key applications, over one or more Internet connections.
- **Network Security** from a global leader.
- At a **fixed monthly price per site**, with no up front installation or licence fees.

Why us?

OntheNet is an Internet Service Provider supplying large scale, secure private networks across Australia since the 1990's. Now partnering with **Fortinet®**, a world leader in network security, OntheNet has extended our unique blend of WAN engineering and security expertise to include the latest SD-WAN and security technologies. OntheNet (Gold Coast) Managed SD-WAN includes:

- A **web portal** showing the status of each related Internet service per site and security policies in place.

- Technical guidance, **PLATINUM level support** and solution management from a team of skilled Australian engineers with 20+ years experience.

Options and Scalability

Rapidly growing or larger businesses may also require **options** such as:

- **FortiAnalyzer** - Enhanced, longer term reporting and analytics to meet compliance requirements.

- Secured connectivity to **cloud or data centre** locations.
- **Security** for mobile / Work From Home **WFH staff**.

Every Managed SD-WAN solution is bespoke

Our dedicated corporate sales team of experienced Australians will give you a no-fuss obligation free quote based on your brief and our analysis of your business network.

FAQ's

What is SD-WAN?

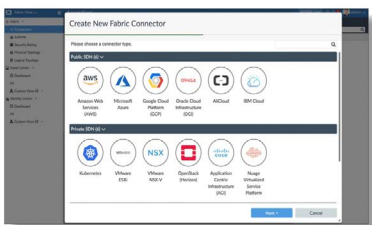

SD-WAN is an acronym for 'Software Defined Wide Area Network'. The software on specific devices or virtual platforms connects, secures and controls the performance of Internet services. This software typically creates a virtual secured private network across many geographical sites and can also manage multiple Internet services at each site in terms of automated redundancy and policy based routing.

What do I get when I order Managed SD-WAN from OntheNet?

OntheNet will help scope and define the ideal Managed SD-WAN solution but most services include a selected Fortinet® **FortiGate** firewall at each premises, with either an Advanced or Unified Threat Management software licence included. That device is configured to be a firewall for those premises with its capability determined by the licence selected. OntheNet also includes access to **FortiManager** to view the status of each site and Internet service connected. OntheNet engineers manage **FortiManager** for customers to streamline provisioning of devices and network and policy updates.

[FortiManager Data Sheet.](#)

OntheNet manage all devices remotely including moves, adds, changes requested via the OntheNet toolbox.

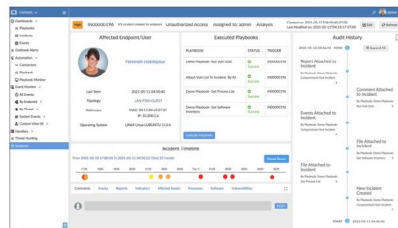

Are the Internet connections included?

Internet services are purchased separately. The primary service is to be supplied by OntheNet. Failover 4G and a variety of Internet service technology types are available from OntheNet, often using other carrier networks for maximum diversity. Customers can supply their own 4G SIMs or secondary Internet services.

What else can the FortiGate solutions do besides security?

There are numerous policies that can be applied to each device to manage multiple Internet connections. Common configurations are a primary NBN service with 4G Failover, or a Business Fibre service and secondary NBN service. VoIP data and key business applications are often prioritised.

What is FortiAnalyzer?

FortiAnalyzer is for businesses who require detailed reporting, log management and analytics over a longer term, often for industry compliance, may wish to utilise this comprehensive tool dedicated to that purpose. It is available as an option when required.

How much is Managed SD-WAN?

OntheNet will provide a fixed monthly price per site quote based on a 36 month term, usually with no upfront costs or annual licence renewals. There are questions we ask to define the most appropriate firewall model, software licence, the ideal network and security policies for your business.

For SD-WAN contact Corporate Sales on corporate@onthenet.com.au or call direct on (07) 5553 9299.

Can OntheNet install this service at our shops/ offices/ branches nationally?

Yes. OntheNet can arrange installation and network smart hands nearly anywhere in Australia at competitive rates.

What FortiGate products does OntheNet use?

FortiGate 40F ([Datasheet](#))

1 to 10 users – 800Mbps Firewall Throughput – 1 x 1Gb WAN and 4 x 1GB LAN.
